- ✓ **Auto Calculations Of Material Requirements Through 'PURCHASE ADVISOR'**
- ✓ **Generation Of Purchase Orders Through 'PURCHASE ADVISOR'**

Enjoy Maximum Process Flexibility While Deploying Best Industry Practices Into Your Business

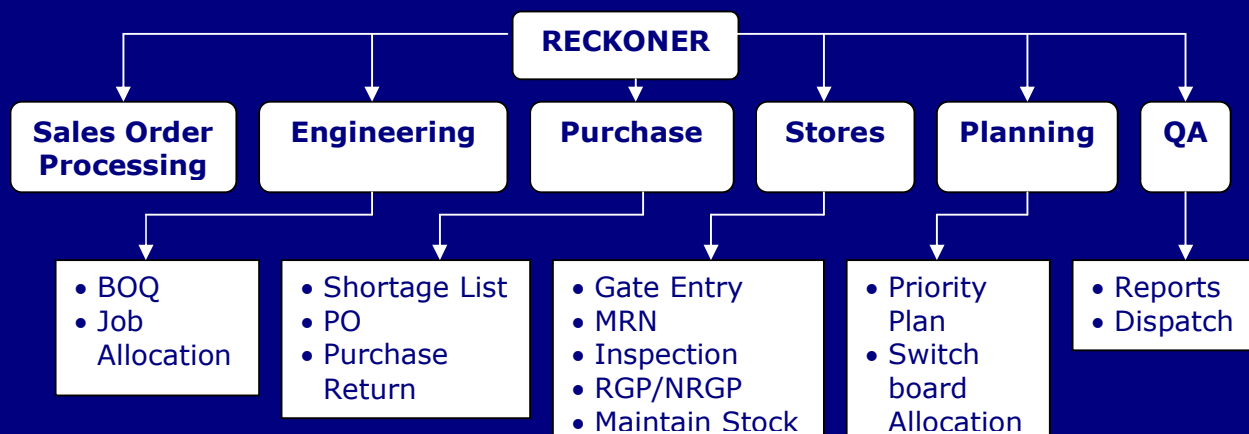

## Why RECKONER?

**Integrated customer order information**—This is the place where the customer order lives from the time a customer order has been received until the loading dock ships the Panel. By having this information in a single system you can keep track of orders more easily, and coordinate manufacturing, inventory and shipping concurrently.

**Prioritized and swift manufacturing process**—RECKONER is equipped for capturing data through the organization's unique manufacturing processes like Fabrication, Assembly, etc as followed by your organization. Standardizing these processes through the system's embedded logic increases your productivity.

**Reduced inventory**—RECKONER smoothens the manufacturing process flow by improving visibility of the order fulfillment process inside the company. This leads to reduced inventories of the materials used to make products (of all categories), helping users to plan deliveries to customers more efficiently.

## TECHNOLOGY PERSPECTIVE:

- ✓ **3 Tier Architecture**
- ✓ **Microsoft's Visual Basic / SQL Server Database**
- ✓ **Various Hosting Options / Models**
- ✓ **Report Export Facility To txt, pdf, xls, Other Formats**
- ✓ **Graphical Report Generation & Customization**
